Chad Koslovsky

Systems engineering | From hardware to recovery

Milliken, Colorado · chad@koslovsky.xyz

Sr. Proxmox Virtualization Automation Systems Administrator | Tract Capital

01 PROFILE

I like the work that connects a server change to the people depending on it. My background spans datacenter operations, NOC escalations and client systems, with hands-on workload modernization and a habit of building tools for the work that comes next.

02 EXPERIENCE

Founder / Product Engineer / Systems Lead · Technomancy IT LLC | Present

Run a referral-based technical practice, carrying client systems from an incomplete need through implementation and direct on-call support.

Build tenant-aware services and authenticated integrations, keeping application access, infrastructure and support responsibilities connected.

Senior Systems Engineer / Datacenter Architect · Front Range Internet Inc. | 2015-2020

Ran the NOC and handled engineering escalations; led engineering through the company purchase and later held sole systems-engineering responsibility for about a year.

Migrated workloads from Hyper-V and VMware ESXi into Docker and Kubernetes, upgraded servers and firewalls, and ran SOC 1 and SOC 2 audits.

Systems / Software Engineer · Office Evolution | 2014-2015

Built shared operational applications across locations, connecting CRM, provisioning, onboarding and service work.

Made cross-department handoffs explicit in the software and worked with the CEO and CIO on operational systems.

Network & Systems Engineer · PlumChoice / Everon | 2012-2014

Engineered and supported networks, systems and endpoints for managed-service clients, including on-call work.

Built repeatable diagnostic and support tools and worked directly with owners and users to resolve recurring problems.

Infrastructure and Systems Focal · IBM | 2010-2012

Served as the infrastructure focal for shared enterprise services, coordinating changes and incidents across application, infrastructure and vendor teams.

Automated audit and backup workflows and managed virtualization test labs and hosted desktop platforms.

03 SELECTED WORK

Excell Services | Server and network renewal · Technomancy IT client, Wray, Colorado

For a legacy client environment, replaced or rebuilt servers and employee computers and upgraded the network. Connected a satellite location using VPN, Windows Server and Active Directory so corporate users could reach the systems they needed.

Investigated network service costs and secured a one-time $15,000 CenturyLink refund.

Technomancy platform | Deployment and restore tooling · Own technical practice and client-operations product

Built delivery tooling for the practice’s support platform that tags images from Git, applies migrations and records deployment status, then checks container health and public HTTP responses.

Added a restore-verification workflow that checks a backup checksum, restores into disposable PostgreSQL and checks table counts, giving recovery a concrete validation path.

04 CAPABILITIES

VMware ESXi & Hyper-V; Docker & Kubernetes · Linux administration; Bash & Python · Networks, VPNs & server infrastructure · Backup verification, SOPs & SOC 1/SOC 2 audit ownership · NOC monitoring, troubleshooting & escalation
